Business Within Limits Oct 02 2022 The book explores the Deep Ecology perspective and Buddhist Economics for transforming business toward a more ecological and human form. It argues that ecology and ethics provide limits for business within which business is legitimate and productive. By transgressing ecological and ethical limits business activities become destructive and self-defeating. Today's business model is based on and cultivates narrow self-centeredness. Both Deep Ecology and Buddhist Economics point out that emphasizing individuality and promoting the greatest fulfillment of the desires of the individual conjointly lead to destruction. Happiness is linked to wholeness, not to personal wealth. We need to find new ways of doing business, ways that respect the ecological and ethical limits of business activities. Acting within limits provides the hope and promise of contributing to the preservation and enrichment of the world.

Globalisation and Ecological Integrity in Science and International Law Mar 15 2021 This volume returns to one of the major themes of the Global Ecological Integrity Group: the interface between integrity as a scientific concept and a number of important issues in ethics, international law and public health. The main scholars who have worked on these topics over the years return to re-examine these dimensions from the viewpoint of global governance.

SOCIAL AND ECONOMIC DEVELOPMENT - Volume V Nov 30 2019 Social and Economic Development is a component of Encyclopedia of Development and Economic Sciences in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. The Theme on Social and Economic Development provides the essential aspects and a myriad of issues of great relevance to our world such as: Socioeconomic Developmental Social Work; Perspectives on Contemporary Socioeconomic Development; Sustainable Development of Natural Resource Capital; Sustainable Development Of Human Resource Capital; Intellectual And Knowledge Capital For Sustainable Development At Local, National, Regional, And Global Levels; Economic And Financial System Development Information And Knowledge; Institutional And Infrastructure System Development Information And Knowledge; Basic Principles Of Sustainable Development; Environmental Economics And Sustainable Development; Implementing Sustainable Development In A Changing World; Economic Sociology: Its History And Development; The Socioeconomics Of Agriculture; Agricultural And Rural Geography; Impact Of Global Change On Agriculture; Human Nutrition: An Overview; The Role Of Inter- And Nongovernmental Organizations; Nongovernmental Organizations; Social And Cultural Development Of Human Resources. This 8-volume set contains several chapters, each of size 5000-30000 words, with perspectives, issues on social and Economic Development. These volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

World Ecological Degradation Mar 03 2020 Deforestation, soil runoff, salination, pollution. While recurrent themes of the contemporary world, they are not new to us. In this broad sweeping review of the environmental impacts of human settlement and development worldwide over the past 5,000 years, Sing C. Chew shows that these processes are as old as civilization itself. With examples ranging from Ancient Mesopotamia to Malaya, Mycenaean Greece to Ming China, Chew shows that the processes of population growth, intensive resource accumulation, and urbanization in ancient and modern societies almost universally bring on ecological disaster, which often contributes to the decline and fall of that society. He then turns his eye to the development of the modern European world-system and its impact on the environment. Challenging us to change these long-term trends, Chew also traces the existence of environmental conservation ideas and movements over the span of 5,000 years. Can we do it? Look at Chew's evidence of the past five millennia and decide. Ideal for courses in environmental history, anthropology, and sociology, and world-systems theory.

[Principles of Environmental Economics and Sustainability](#) Jul 07 2020 Recent years have witnessed considerable consolidation between the disciplines of environmental and ecological economics at research level, but until now textbooks in the area have done little to reflect this. Ahmed Hussen's book is to date the only one to reconcile the two standpoints. The central focus of the book will continue to be on this systematic integration of both mainstream and ecological approaches to environmental economics, and an acknowledgement that enduring solutions to major contemporary environmental challenges can be obtained through studies based on a well-conceived and balanced interdisciplinary approach. However, this third edition also contains much that is new. Chiefly, brand new chapters appear covering the following topics: The economics of climate change The economics of biodiversity and ecosystem services 'Green' accounting and alternative economic and social indicators of sustainability The business case for environmental sustainability An Appendix that provides a brief historical account of the development of ecological economics The result is a comprehensive introduction to the main facets of environmental and ecological economics — a text that boldly refuses to put up barriers between disciplines and takes a holistic approach to vital issues. This student-friendly textbook contains a variety of study tools including learning points, boxed features, case studies, revision questions and discussion questions, and an Appendix that provides students with a review of basic economic principles relevant to the study of the environment and its management. Written in a clear and accessible style, this book will prove an excellent choice for introducing both students and academics to the world of environmental economics.

Living within Limits Jun 29 2022 "We fail to mandate economic sanity," writes Garrett Hardin, "because our brains are addled by...compassion." With such startling assertions, Hardin has cut a swathe through the field of ecology for decades, winning a reputation as a fearless and original thinker. A prominent biologist, ecological philosopher, and keen student of human population control, Hardin now offers the finest summation of his

work to date, with an eloquent argument for accepting the limits of the earth's resources--and the hard choices we must make to live within them. In *Living Within Limits*, Hardin focuses on the neglected problem of overpopulation, making a forceful case for dramatically changing the way we live in and manage our world. Our world itself, he writes, is in the dilemma of the lifeboat: it can only hold a certain number of people before it sinks--not everyone can be saved. The old idea of progress and limitless growth misses the point that the earth (and each part of it) has a limited carrying capacity; sentimentality should not cloud our ability to take necessary steps to limit population. But Hardin refutes the notion that goodwill and voluntary restraints will be enough. Instead, nations where population is growing must suffer the consequences alone. Too often, he writes, we operate on the faulty principle of shared costs matched with private profits. In Hardin's famous essay, "The Tragedy of the Commons," he showed how a village common pasture suffers from overgrazing because each villager puts as many cattle on it as possible--since the costs of grazing are shared by everyone, but the profits go to the individual. The metaphor applies to global ecology, he argues, making a powerful case for closed borders and an end to immigration from poor nations to rich ones. "The production of human beings is the result of very localized human actions; corrective action must be local....Globalizing the 'population problem' would only ensure that it would never be solved." Hardin does not shrink from the startling implications of his argument, as he criticizes the shipment of food to overpopulated regions and asserts that coercion in population control is inevitable. But he also proposes a free flow of information across boundaries, to allow each state to help itself. "The time-honored practice of pollute and move on is no longer acceptable," Hardin tells us. We now fill the globe, and we have no where else to go. In this powerful book, one of our leading ecological philosophers points out the hard choices we must make--and the solutions we have been afraid to consider.

Ecology and Socialism Apr 15 2021 Around the world, consciousness of the threat to our environment is growing. The majority of solutions on offer, from using efficient light bulbs to biking to work, focus on individual lifestyle changes, yet the scale of the crisis requires far deeper adjustments. *Ecology and Socialism* argues that time still remains to save humanity and the planet, but only by building social movements for environmental justice that can demand qualitative changes in our economy, workplaces, and infrastructure. Chris Williams is a longtime environmental activist, professor of physics and chemistry at Pace University, and chair of the science department at Packer Collegiate Institute. He lives in New York City.

The Environment and Christian Ethics Aug 27 2019 A new approach to environmental ethics from within the Christian tradition.

Nested Ecology Jul 19 2021 Nested Ecology provides a pragmatic and functional approach to realizing a sustainable environmental ethic. Edward T. Wimberley asserts that a practical ecological ethic must focus on human decision making within the context of larger social and environmental systems. Think of a set of mixing bowls, in which smaller bowls sit within larger ones. Wimberley sees the world in much the same way, with personal ecologies embedded in social ecologies that in turn are nested within natural ecologies. Wimberley urges a complete reconceptualization of the human place in the ecological hierarchy. Going beyond the physical realms in which people live and interact, he extends the concept of ecology to spirituality and the "ecology of the unknown." In doing so, Wimberley defines a new environmental philosophy and a new ecological ethic.

Ecological Politics and Democratic Theory Jul 27 2019 This volume examines the reasons why some despair at the prospects for an ecological form of democracy, and challenges the recent 'deliberative turn' in environmental political thought. Deliberative democracy has become popular for those seeking a reconciliation of these two forms of politics. Demand for equal access to a public forum in which the best argument will prevail appears to offer a way of incorporating environmental interests into the democratic process. This book argues that deliberative theory, far from being friendly to the environmental movement, shackles the ability those seeking radical change to make their voices heard in the most effective manner. Mathew Humphrey challenges beliefs about the relationship between ecological politics and democracy at a time when those who take direct action are being swept up in the War on Terror. By calling for a more open and contested form of democracy, in which the boundaries of what constitutes 'acceptable' behaviour are not decided in advance of actual debate, *Ecological Politics and Democratic Theory* is an original contribution to the literature on environmental politics, ecological thought and democracy.

Encyclopedia of Environment and Society Feb 11 2021 The *Encyclopedia of Environment and Society* brings together multiplying issues, concepts, theories, examples, problems, and policies, with the goal of clearly explicating an emerging way of thinking about people and nature. With more than 1,200 entries written by experts from incredibly diverse fields, this innovative resource is a first step toward diving into the deep pool of emerging knowledge. The five volumes of this *Encyclopedia* represent more than a catalogue of terms. Rather, they capture the spirit of the moment, a fascinating time when global warming and genetic engineering represent only two of the most obvious examples of socio-environmental issues.

Monthly Labor Review Aug 20 2021 Publishes in-depth articles on labor subjects, current labor statistics, information about current labor contracts, and book reviews.

The Bankruptcy of Economics: Ecology, Economics and the Sustainability of the Earth Jan 25 2022 We live in times of uncertainty and insecurity, at a personal, national and global level. Writers such as Samuel P. Huntington and Robert D. Kaplan, respectively, have spoken of an emerging 'clash of civilizations' and of 'coming anarchy'. This book is also concerned with the future of civilization, in particular with the conflict between economic growth and the sustainability of the biophysical lifesupport systems of the planet, arguing that the flawed system of orthodox neo-classical economics has justified the modernist belief in the necessity of unending economic growth and the ceaseless exploitation of nature.

Environment and Global Modernity Feb 23 2022 This accomplished book argues that we can only make sense of environmental issues if we consider them as part of a more encompassing process of social transformation. It asks whether there is an emerging consensus between social scientists on the central issues in the debate on environmental change, and if concerns about the environment constitute a major prop to the process of globalization? The book provides a thorough discussion of the central themes in environmental sociology, identifying two traditions: ecological modernization theory and risk society theory.

A Guidebook for Integrated Ecological Assessments Apr 03 2020 A rich set of protocols for the process of assessing the ecological make-up of the land so as to guide environmental decision-making.

Handbuch Frieden Sep 20 2021 Dieses Handbuch beinhaltet das aktuelle Wissen zu Frieden, Friedenspolitik und zur Friedens- und Konfliktforschung. Die Beiträge behandeln den Friedensbegriff systematisch aus wissenschaftlicher und politischer Perspektive. Dabei werden die vielfältigen inhaltlichen Dimensionen und Bezüge des Begriffsfeldes Frieden verdeutlicht. Die Befunde der insgesamt 51 AutorInnen bieten ein umfassendes Bild der aktuellen und künftigen Herausforderungen von Friedensforschung und Friedenspolitik und beziehen die Praxis der Friedensarbeit ein. Das Handbuch Frieden ist somit unverzichtbar für alle Lehrenden und Forschenden an einschlägigen universitären und außeruniversitären Einrichtungen, für Studierende, SchülerInnen sowie in der Erwachsenenbildung. Es richtet sich zugleich an friedenspraktisch Tätige, SoldatInnen sowie an eine allgemein an friedenspolitischen Themen interessierte Öffentlichkeit.

The Greening of Sovereignty in World Politics Sep 08 2020 This is the first book to connect two important subfields in international relations: global environmental politics and the study of sovereignty--the state's exclusive authority within its territorial boundaries. The authors argue that the relationship between environmental practices and sovereignty is by no means straightforward and in fact elucidates some of the core issues and challenges in world politics today. Although a number of international relations scholars have assumed that transnational environmental organizations and institutions are eroding sovereignty, this book makes the case that ecological integrity and state sovereignty are not necessarily in opposition. It shows that the norms of sovereignty are now shifting in the face of attempts to cope with ecological destruction, but that this

"greening" of sovereignty is an uneven, variegated, and highly contested process. By establishing that sovereignty is a socially constructed institution that varies according to time and place, with multiple meanings and changing practices, *The Greening of Sovereignty in World Politics* illuminates the complexity of the relationship between sovereignty and environmental matters and casts both in a new light. Contributors : Daniel Deudney, Margaret Scully Granzeier, Joseph Henri Jupille, Sheldon Kamieniecki, Thom Kuehls, Ronnie D. Lipschutz, Karen T. Litfin, Marian A. L. Miller, Ronald B. Mitchell, Paul Wapner, Veronica Ward, Franke Wilmer. [Encyclopedia of Ecology](#) Jun 25 2019 The groundbreaking *Encyclopedia of Ecology* provides an authoritative and comprehensive coverage of the complete field of ecology, from general to applied. It includes over 500 detailed entries, structured to provide the user with complete coverage of the core knowledge, accessed as intuitively as possible, and heavily cross-referenced. Written by an international team of leading experts, this revolutionary encyclopedia will serve as a one-stop-shop to concise, stand-alone articles to be used as a point of entry for undergraduate students, or as a tool for active researchers looking for the latest information in the field. Entries cover a range of topics, including: Behavioral Ecology Ecological Processes Ecological Modeling Ecological Engineering Ecological Indicators Ecological Informatics Ecosystems Ecotoxicology Evolutionary Ecology General Ecology Global Ecology Human Ecology System Ecology The first reference work to cover all aspects of ecology, from basic to applied Over 500 concise, stand-alone articles are written by prominent leaders in the field Article text is supported by full-color photos, drawings, tables, and other visual material Fully indexed and cross referenced with detailed references for further study Writing level is suited to both the expert and non-expert Available electronically on ScienceDirect shortly upon publication

Ecological Ethics Dec 12 2020 Taking issue with the common assumption that human ethics can be 'extended' to meet the demands of the ongoing ecological crisis, Curry demonstrates that a new and truly ecological ethic is both possible and urgently needed.

[America's Environmental Legacies](#) Dec 24 2021 This powerful book focuses on the capacity of the American political system to respond to ecological challenges through policy perspectives, the constraints of our written Constitution, and the determination we must muster to address these tests of national character. Put simply, this is a book about politics, policy, and political will. Kalinowski brilliantly shows that America's collective will is found in the cultural values enunciated by the Founding Fathers and passed down through history with modifications. It comprises the essential missing ingredient in determining how we currently respond to crises. Thomas Jefferson, Alexander Hamilton, and James Madison had distinct ideas concerning the role that Nature might play in the future. Recognizing the origins and impacts of their environmental legacies is the key to interpreting where American environmental politics is today, how we got here, and where we might be headed.

Global Migration beyond Limits May 29 2022 *Global Migration beyond Limits* takes a critical approach to mainstream economic accounts of migration, environment, and inequality. Drawing on a range of case studies from Africa, the Middle East, Asia, Australia, Europe, and the Americas, Obeng-Odoom argues that much of the crisis of migration can be understood as a reflection of cumulative stratification at different scales in the global system, though the form of migration is conditioned by more than economic forces. Examining the experiences of migrant farmers, street workers, refugees, international students, and many more, this book shows that the so-called migration crisis is an expression of a political-economic system in which socially created value is privately appropriated as rents by a privileged few who use institutions such as land and property rights, race, ethnicity, class, and gender to keep others in their place.

Global Development of Organic Agriculture Nov 22 2021 Modern agriculture and food systems, including organic agriculture, are undergoing a technological and structural modernisation and are faced with a growing globalisation. Organic agriculture (OA) can be seen as pioneering efforts to create sustainable development based on other principles than mainstream agriculture. There are however large differences between the challenges connected to, on one hand, modern farming and consumption in high-income countries and, on the other, smallholder farmers and resource poor consumers in low-income countries. The point of departure is the increasing globalisation and the production and trade of food and fodder and how this influences the role of OA. This book provides an overview of the potential role and challenges of organic agriculture in this global perspective, as seen from different perspectives such as sustainability, food security and fair trade.

Encyclopedia of Global Change: J-Z Jun 05 2020 This reference work concentrates upon both the natural and man-made changes to the world's environment. Containing over 300 original, signed articles by distinguished scholars and 1,500 illustrations it is the comprehensive encyclopedia for this multi-discipline, high profile field. Articles fall into the general categories of: concepts of global change, earth and earth systems, human factors, resources, responses to global change agreements and associations, biographies and case studies. The accessible and jargon-free language make it an excellent work for the professional scholar as well as the interested general reader and a detail network of cross references and blind entries will help readers at all levels.

[The Oxford Handbook of Mission Studies](#) May 17 2021 *The Oxford Handbook of Mission Studies* represents more than a century of scholarship related to the theology, history, and methodology of the propagation of Christian faith and the engagement of Christians with cultures, religions, and societies worldwide. It contains more than 40 articles by experts from different disciplinary and ecclesial perspectives, who are from all continents. It not only offers a broad overview of key approaches and issues in mission studies but it also highlights current trends and suggests future developments. The Handbook builds on renewed interest in mission studies this century generated by recent key statements on mission from ecumenical, evangelical, Catholic, and Orthodox sources, and by a spate of academic works on the topic. Western church leaders now apply insights from foreign missions (such as, inculturation, liberation, interfaith work, and power encounter) to today's multicultural societies. Meanwhile, there are new initiatives in mission from the Majority World, where most Christians live, so that sending is not only 'from the west to the rest' but 'from everywhere to everywhere'. Therefore, this volume aims to reflect the voices of the receivers of mission as well as its protagonists and to raise awareness of new movements. In a time of growing recognition of 'religions' more generally, this work examines and theorizes the missional dimensions of the world's largest religion: its agendas, growth, outreach, role in public life, effect on cultures, relevance for development, and its approaches to other communities.

Human Ecology Apr 27 2022 'The scope and clarity of this book make it accessible and informative to a wide readership. Its messages should be an essential component of the education for all students from secondary school to university... [It] provides a clear and comprehensible account of concepts that can be applied in our individual and collective lives to pursue the promising and secure future to which we all aspire' From the Foreword by Maurice Strong, Chairman of the Earth Council and former Secretary General of the United Nations Conference on Environment and Development (Earth Summit) The most important questions of the future will turn on the relationship between human societies and the natural ecosystems on which we all, in the end, depend. The interactions and interdependencies of the social and natural worlds are the focus of growing attention from a wide range of environmental, social and life sciences. Understanding them is critical to achieving the balance involved in sustainable development. *Human Ecology: Basic Concepts for Sustainable Development* presents an extremely clear and accessible account of this complex range of issues and of the concepts and tools required to understand and tackle them. Extensively supported by graphics and detailed examples, this book makes an excellent introduction for students at all levels, and for general readers wanting to know why and how to respond to the dilemmas we face.

Encyclopedia of Ecology Oct 22 2021 Encyclopedia of Ecology, Second Edition continues the acclaimed work of the previous edition published in 2008. It covers all scales of biological organization, from organisms, to populations, to communities and ecosystems. Laboratory, field, simulation modelling, and theoretical approaches are presented to show how living systems sustain structure and function in space and time. New areas of focus include micro- and macro scales, molecular and genetic ecology, and global ecology (e.g., climate change, earth transformations, ecosystem services, and the food-water-energy nexus) are included. In addition, new, international experts in ecology contribute on a variety of topics. Offers the most broad-ranging and comprehensive resource available in the field of ecology Provides foundational content and suggests further reading Incorporates the expertise of over 500 outstanding investigators in the field of ecology, including top young scientists with both research and teaching experience Includes multimedia resources, such as an Interactive Map Viewer and links to a CSDMS (Community Surface Dynamics Modeling System), an open-source platform for modelers to share and link models dealing with earth system processes

Christianity and Ecological Theology Nov 10 2020 There has been a proliferation of publications in the field of Christian ecological theology over the last three decades or so. These include a number of recent edited volumes, each covering a range of topics and consolidating many of the emerging insights in ecological theology. The call for Christian churches to respond to the environmental crisis has been reiterated numerous times in this vast corpus of literature, also in South Africa.

The Environment in Anthropology (Second Edition) Mar 27 2022 The Environment in Anthropology presents ecology and current environmental studies from an anthropological point of view. From the classics to the most current scholarship, this text connects the theory and practice in environment and anthropology, providing readers with a strong intellectual foundation as well as offering practical tools for solving environmental problems. Haenn, Wilk, and Harnish pose the most urgent questions of environmental protection: How are environmental problems mediated by cultural values? What are the environmental effects of urbanization? When do environmentalists' goals and actions conflict with those of indigenous peoples? How can we assess the impact of "environmentally correct" businesses? They also cover the fundamental topics of population growth, large scale development, biodiversity conservation, sustainable environmental management, indigenous groups, consumption, and globalization. This revised edition addresses new topics such as water, toxic waste, neoliberalism, environmental history, environmental activism, and REDD (Reducing Emissions from Deforestation and Forest Degradation), and it situates anthropology in the multi-disciplinary field of environmental research. It also offers readers a guide for developing their own plan for environmental action. This volume offers an introduction to the breadth of ecological and environmental anthropology as well as to its historical trends and current developments. Balancing landmark essays with cutting-edge scholarship, bridging theory and practice, and offering suggestions for further reading and new directions for research, *The Environment in Anthropology* continues to provide the ideal introduction to a burgeoning field.

Environmentalism for a New Millennium Oct 29 2019 The vast majority of people in the industrialized world consider themselves environmentalists. Yet environmental problems continue to worsen. While the environmental movement is winning the battle for the hearts and minds of citizens in the United States and across the globe, it may be losing the war to preserve the health of the planet and its biological diversity. The reasons become clear in this book. Leslie Paul Thiele provides a much needed analysis of the driving forces within the environmental movement and the key challenges that it faces. He begins with a concise history of the movement in the United States, where he identifies four successive waves of environmental thought and action. The first wave, conservation, emerged in the mid 1800s and focused on the responsible use of natural resources and the preservation of isolated tracts of wilderness. By the 1960s, the general public had become aware of the widespread impact of environmental problems on human health and welfare. A concern for the containment of industrial society's environmental degradation emerged. This second wave was followed by a period of co-optation beginning in the 1980s, as a now popular social movement made a significant impact on public policy and witnessed the dilution of its goals. Thiele largely focuses on the fourth and current wave of coevolution. Coevolutionary thought and action is grounded in the interdependence of humans and nature in a global context. With the goal of sustainable development in mind, contemporary environmentalists argue that human livelihoods must be integrated into complex and evolving ecological systems. This affirmation of coevolutionary interdependence has brought coherence to an inherently diverse social movement. Through extensive interviews and a critical study of environmental publications and scholarly research, the author provides an inside look at the environmental movement. His analysis illuminates the social, economic, political and cultural forces that shape the environmental movement today and set its trajectory for the 21st century. Anyone interested in the future of environmentalism will find this book an invaluable guide.

Implementing Ecological Integrity Jan 01 2020 This book contains some of the papers which were presented at the NATO Science, Environmental Security, Advanced Research Workshop on "Implementing Ecological Integrity: Restoring Regional and Global Environmental and Human Health" held in Budapest from June 26 to July 1, 1999. All papers presented are summarized in the Introduction and, in some cases, shorter versions

are published. A multidisciplinary core of American and Western European participants had met over the preceding years to discuss the concept of ecological integrity. The term "ecological integrity" is found in environmental policy documents but, generally, is not defined. It competes with other recent terms, or environmental narratives, such as "ecosystem health" and "sustainable development" and also with older ones such as "conservation". Therefore, it is deemed important not only to sort out the definitions of these concepts but also to find out whether their practical implications differ. Moreover, it was interesting to find out whether participants from Central and Eastern European Countries (CEEC) and, more generally, from NATO partner countries would be, first, responsive to this concept and, second, would hold different views of it. This explains the broad, albeit not always consistent, range of topics which are covered in this book. The core group learned that CEEC and other NATO partners participants were responsive to the concept but that they were less exclusive of human influence.
