Research for Educational Change

Dec 02 2019

Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice. Focussing its discussion within the context of mathematics education, it argues that while research-generated insights can have beneficial

effects on learning and teaching, the question of how these effects are to be generated and sustained is far from evident. The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice. In the first part of the book, four teams of researchers use different methodologies while analysing the same corpus of

data, collected in a South African mathematics classroom. In the second part, each of these teams makes a specific proposal about what can be done and how so that its research-generated insights have a tangible, beneficial impact on what is happening in mathematical classrooms. Combining two discourses - that of researchers speaking to one another, and that of researchers communicating their insights

those responsible for educational practice - the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education, educational research and classroom practices. This book will be key reading for postgraduates, researchers and academics in education and particularly in the areas of mathematics education, education research, teacher education and classroom practice. It will also appeal to teacher educators, practitioners and undergraduate

adolescent literacy learners with a focus on closing the achievement gap. Despite efforts by educators and policymakers during the past several decades, certain groups of students--primarily African American students, English language learners, and students from low-income homes--continue to underperform on commonly used measures of academic achievement. Too often, teachers and administrators lack both proper preparation and good ideas to confront these issues.

Voices of the Self

May 31 2022 A unique blend of memoir and scholarship, Keith Gilyard's *Voices of the Self* is a penetrating analysis of the linguistic and cultural "collision" experienced by African-American students in the public education system. Gilyard examines black students "negotiate" their way through school and discusses the tension between the use of Black English and Standard English, underlining how that tension is

representative of the deeper conflict that exists between black culture and white expectations. Vivid descriptions—often humorous, sometimes disturbing, always moving—of Gilyard's own childhood experiences in school and society are interlaced with chapters of solid sociolinguistic scholarship. Encompassing the perspectives of both the "street" and the "academy," *Voices of the Self* presents an eloquent argument for cultural and linguistic pluralism in American public schools.

It attempts to identify

10/22

those domains most sensitive to early English instruction by employing a state-of-the-art quantitative research methodology. English education was formally introduced in Japan for fifth and sixth graders in 2011 and is still in its infancy as a program. This study compares two groups (Grade 7 and 8) of students, one with ELES and one without, in order to shed light on their experiences. Comparisons are carried out not only quantitatively, measuring changes in English skills (listening, speaking, reading, and vocabulary / grammar) and the ELES students' affective aspects,

but also qualitatively through in-depth interviews. Thus, this study attempts to capture the ELES students' experiences from a multi-dimensional perspective. The comprehensive literature review provided offers a valuable resource not only for researchers looking for a quick digest of the literature in this field before undertaking their own research, but also for policy-makers seeking to assess how to best implement ELES.

decades of postsocialist transformations, the second edition of *Globalization on the Margins* explores continuities and changes in Central Asian education development since the dissolution of the Soviet Union in 1991, with a particular focus on the developments that took place since the production of the first edition in 2011. Rather than viewing these transformations in isolation, the authors place their analyses within the global context by reflecting on the interaction between Soviet legacies and global education reform pressures in the Central Asian countries. Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan. This new edition, in addition to a revised introduction and a newly added conclusion, consists of four thematic sections, each reflecting a key theme in the educational life of the Central Asian states. These thematic sections, introduction and conclusion collectively update our understanding of the recent developments and challenges in education of the five Central Asian states. They, however, go beyond mere information update, so as to complicate, re-engage, re-form

margins, taking up 'margins' a conceptual, geographic, cultural, and geopolitical construct. Notwithstanding the diversity of local and international authors, variety of theoretical perspectives, methodological approaches, and conceptual lenses, the essays reveal the complexity and uncertainty of the post-socialist education transformations. Instead of portraying the transition process as the influx of Western ideas into the region, Globalization on the Margins provides new lenses to critically examine education as a contested field of

diverse perspectives, competing forces, and multidirectional flow of ideas, concepts, and reforms in Central Asia.

ENDORSEMENTS:

"Hindsight famously brings clarity. And, much of what happened after the fall of the Berlin Wall and the collapse of the Soviet Union has now been correctly deduced over to historians.

Nonetheless, we ignore that history at our peril. The contributors to this volume show that carefully textured and historically attuned education research generates deep insights into ongoing transformations and the political, cultural, social and

economic structures, relations, and practices that do the work of producing margins and centers in the first place." ~ Noah W. Sobe, Loyola University Chicago "Globalization on the margins and at the epicentre of the battles of the Great Powers. Two excellent educators, Sarfaroz Niyozov and Iveta Silova, compiled a timely and long-awaited scholarly work based on empirical research in societies, which had similar history close to three decades ago. All the contributors are prolific educators who know the education system from within and without, who either

the world's center is the focus of the discussions in 'Globalization on the Margins.' The transition to the Western models of education was happening in the context of major paradigm shift, which entire humanity was experiencing and which could be described as the arrival of the new post-industrial civilization. During this process, Central Asian countries have been pushed to the margins, because their contribution to the wealth of the new world know-how was much less pronounced than that of their Western neighbours. tremendous progress in reducing tobacco use during the past 40 years. Despite extensive knowledge about successful interventions, however, approximately one-quarter of American adults still smoke. Tobacco-related illnesses and death place a huge burden on our society. Ending the Tobacco Problem generates a blueprint for the nation in the struggle to reduce tobacco use. The report reviews effective prevention and treatment interventions and considers a set of new tobacco control policies for adoption by federal and state

Carefully constructed with two distinct parts, the book first provides background information on the history and nature of tobacco use, developing the context for the policy blueprint proposed in the second half of the report. The report documents the extraordinary growth of tobacco use during the first half of the 20th century as well as its subsequent reversal in the mid-1960s (in the wake of findings from the Surgeon General). It also reviews the addictive properties of nicotine, delving into the factors that make it so difficult for people to quit and examines

recent trends in tobacco use. In addition, an overview of the development of governmental and nongovernmental tobacco control efforts is provided. After reviewing the ethical grounding of tobacco control, the second half of the book sets forth to present a blueprint for ending the tobacco problem. The book offers broad-reaching recommendations targeting federal, state, local, nonprofit and for-profit entities. This book also identifies the benefits to society when fully implementing effective tobacco control interventions and policies.
