***Grappling With Change in Africa Oct 31 2019*** This book brings revolution to the African continent. It makes it clear that for Africans to advance in life they require a different approach to life. The book uses proverbs and wise sayings from Africa to enhance the notion that Africa as a continent appreciates issues about change and other players from outside the continent get a buy-in into change management. It is now generally accepted that from Cape to Cairo one sees a continent pregnant with resources but it is classified as the poorest by bank balance. The book uses African wisdom to help readers around the world to appreciate the African transformation. Change is always hardest at the beginning but it gets easier and better as days transform into years. Nothing in life changes without change. The book suggests ways of how Africa can swing the pendulum and rise to be a global shining star by owning and using its natural resources wisely and embracing transformational leadership. This would rewrite the economic order and turn the richest poor continent into a super rich continent.

*Management Principles Oct 12 2020 Book & CD. To improve on an award-winning book poses a major challenge to its authors. The authors of this book took the challenge head-on by conducting a major research study to determine what exactly the outcomes are that managers at different levels must deliver in contemporary organisations in South Africa, and the rest of Africa. The findings of this study, which dealt with current and near-future management issues, as well as classical and contemporary thinking about management, were used as the blueprint for the updating of this book. After placing management in context, the authors deal with the knowledge, skills and dispositions required of managers to perform the management functions of planning, organising, leading and controlling in a volatile business world. Examples of how the functions are applied in practice are cited throughout the book. These examples refer mainly to South African organisations and situations that managers in South Africa, and Africa, have to deal with to create and sustain a competitive advantage for their organisations. The book endeavours to break down the silo effect of seeing the management functions as separate activities. This is done by continuously placing the management function at hand in a bigger context. This enables learners of management to assess the implications of management decisions on different people, processes, systems and so on that make up the organisation.*
