Jurist Prudent -- The Judicial Opinions of Lawrence L.

Koontz, Jr., Volume 7 Dec 27 2021 Upon his retirement from active service as a Justice of the Supreme Court of Virginia in 2011, Justice Koontz had completed more than four decades of service to citizens of the Commonwealth of Virginia. In order to recognize that service and help preserve Justice Koontz legacy as one of the outstanding jurists in Virginia and the United States, the

Salem/Roanoke County Bar Association instituted this project to collect all of Justice Koontz's published opinions, both from his tenure as a Justice of the Supreme Court and as an inaugural member of the Court of Appeals of Virginia. The seventh and final volume to be produced by the Opinions Project includes opinions, concurrences and dissents authored by Justice Koontz during the last five years of his service as a Justice of the Supreme Court of Virginia.

The Complete Illustrated Book of Development

Definitions Mar 30 2022 The latest edition of The Illustrated Book of Development Definitions breaks new ground. It addresses traditional and new planning problems: natural and industrial disasters such as hurricanes and oil spills; new housing types and living accommodations; changes in urban design and practice like new urbanism; sustainability; pedestrian and bicycle friendly environments; and more. Joining Harvey S. Moskowitz and Carl G. Lindbloom, authors of the first three editions, are two prominent, nationally known planners: David Listokin and Richard Preiss. Attorney Dwight H. Merriam adds legal annotations to almost all

2,276 definitions. These citations from court decisions bridge the gap between land use theory and real world application, bringing a new dimension to this edition. More than 20,000 copies of previous editions were sold over four decades to professionals and government representatives, such as members of planning and zoning boards and municipal governing bodies. This first revision in ten years updates what is widely acknowledged as an essential, standard reference for planners.

Decision-making and Radioactive Waste Disposal Jul 30 2019 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200,000 cubic meters of low and intermediate-level waste each year. Vital medical procedures, industrial processes and basic science research also produce significant quantities of waste. All of this waste must be shielded from the population for extended periods of time. Finding suitable locations for disposal facilities is beset by two main problems: community responses to siting proposals are generally antagonistic and, as a result, governments have tended to be reactive in their policy-making. **Decision-making and Radioactive Waste Disposal** explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made. Five countries are featured: the US, Australia, Spain, South Korea and Switzerland. This book seeks to establish an

understanding of the political, economic, environmental, legal and social dimensions of siting across those countries. This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts. The book will be of interest to students and scholars of environmental law, justice, management, politics, energy and security policy as well as decision-makers in government and industry.

Modern Architecture and its Representation in Colonial

Eritrea Jun 28 2019 Modern Architecture and its Representation in Colonial Eritrea offers a critical assessment of architecture and urbanism constructed in Eritrea during the Italian colonial period spanning from 1890-1941. Drawing together imperial projects, modernist aesthetics, and fascist motives, the book examines how the merger of these three significant influences yielded a complex built environment that served to emulate, if not redefine, Italian colonial pursuits. As Italy's *colonia primogenità* or 'first born colony', Eritrea and its capital, Asmara, not only bore witness to the emergence of politicized interiors and international expositions, the colony became a vehicle that polarized issues of race and gender. Exploring discourses of modernity in Africa, this book moves between histories of architecture, urbanism, literature and media to describe how Eritrea and Asmara became a crucial fulcrum for Italy's ill-fated pursuits in Ethiopia and other neighboring countries. Consequently, modern architecture inscribed Eritrean subjectivities while

redefining technologies that affected constructions of the colonial interior. *Modern Architecture and its Representation in Colonial Eritrea* demonstrates how architecture in Asmara reshaped the creation and reception of Italian East Africa.

Architecture, Power and National Identity Apr 06 2020

The first edition of *Architecture, Power, and National Identity*, published in 1992, has become a classic, winning the prestigious Spiro Kostof award for the best book in architecture and urbanism. Lawrence Vale fully has fully updated the book, which focuses on the relationship between the design of national capitals across the world and the formation of national identity in modernity. Tied to this, it explains the role that architecture and planning play in the forceful assertion of state power. The book is truly international in scope, looking at capital cities in the United States, India, Brazil, Sri Lanka, Kuwait, Bangladesh, and Papua New Guinea.

Fresh Kills Aug 23 2021 *Fresh Kills*—a monumental 2,200-acre site on Staten Island—was once the world's largest landfill. From 1948 to 2001, it was the main receptacle for New York City's refuse. After the 9/11 attacks, it reopened briefly to receive human remains and rubble from the destroyed Twin Towers, turning a notorious disposal site into a cemetery. Today, a mammoth reclamation project is transforming the landfill site, constructing an expansive park three times the size of

Central Park. Martin V. Melosi provides a comprehensive chronicle of Fresh Kills that offers new insights into the growth and development of New York City and the relationship among consumption, waste, and disposal. He traces the metamorphoses of the landscape, following it from salt marsh to landfill to cemetery and looks ahead to the future park. By centering the problem of solid-waste disposal, Melosi highlights the unwanted consequences of mass consumption. He presents the Fresh Kills space as an embodiment of massive waste, linking consumption to the continuing presence of its discards. Melosi also uses the landfill as a lens for understanding Staten Island's history and its relationship with greater New York City. The first book on the history of the iconic landfill, Fresh Kills unites environmental, political, and cultural history to offer a reflection on material culture, consumer practices, and perceptions of value and worthlessness.

Highway Laws of Virginia Oct 13 2020 This fully annotated and indexed edition was compiled from the Code of Virginia of 1950 as amended since the original publication. It is an ideal publication for personnel within the Virginia Department of Transportation, as well as attorneys who specialize in topics related to transportation. The eBook contains a broad range of statutes pertaining to the Virginia Department of Transportation on such topics as aviation, bridges, motor vehicles, taxation and ports. In addition, it includes rules and regulations of the Commonwealth Transportation

Board and a digest of reported cases pertaining to the Department of Transportation. No other publication brings together relevant law in all these areas in a handy, easy-to-use format. The eBook offers a new dimension in legal research. This fully-integrated research system contains all information from Highway Laws of Virginia in an easy-to-use, searchable format.

Power at Ground Zero Jan 28 2022 The destruction of the World Trade Center complex on 9/11 set in motion a chain of events that fundamentally transformed both the United States and the wider world. War has raged in the Middle East for a decade and a half, and Americans have become accustomed to surveillance, enhanced security, and periodic terrorist attacks. But the symbolic locus of the post-9/11 world has always been "Ground Zero"--the sixteen acres in Manhattan's financial district where the twin towers collapsed. While idealism dominated in the initial rebuilding phase, interest-group trench warfare soon ensued. Myriad battles involving all of the interests with a stake in that space--real estate interests, victims' families, politicians, the Port Authority of New York and New Jersey, the federal government, community groups,

architectural firms, and a panoply of ambitious entrepreneurs grasping for pieces of the pie-raged for over a decade, and nearly fifteen years later there are still loose ends that need resolution. In *Power at Ground Zero*, Lynne Sagalyn offers the definitive account of one of the greatest reconstruction projects in modern world history. Sagalyn is America's most eminent scholar of major urban reconstruction projects, and this is the culmination of over a decade of research. Both epic in scope and granular in detail, this is at base a classic New York story. Sagalyn has an extraordinary command over all of the actors and moving parts involved in the drama: the long parade of New York and New Jersey governors involved in the project, Mayor Michael Bloomberg, various Port Authority leaders, the ubiquitous real estate magnate Larry Silverstein, and architectural superstars like Santiago Calatrava and Daniel Libeskind. As she shows, political competition at the local, state, regional, and federal level along with vast sums of money drove every aspect of the planning process. But the reconstruction project was always about more than complex real estate deals and jockeying among local politicians. The symbolism of the reconstruction extended far beyond New York and was freighted with the twin tasks of symbolizing American resilience and projecting American power. As a result, every aspect was contested. As Sagalyn points out, while modern city building is often dismissed as cold-hearted and detached from meaning, the

opposite was true at Ground Zero. Virtually every action was infused with symbolic significance and needed to be debated. The emotional dimension of 9/11 made this large-scale rebuilding effort unique; it supercharged the complexity of the rebuilding process with both sanctity and a truly unique politics. Covering all of this and more, *Power at Ground Zero* is sure to stand as the most important book ever written on the aftermath of arguably the most significant isolated event in the post-Cold War era.

Central Collecting Point in Munich, The Sep 11 2020

A compelling exploration of the many issues surrounding the restoration and restitution of Nazi-stolen art at the end of World War II At the end of World War II, the US Office of Military Government for Germany and Bavaria, through its Monuments, Fine Arts, and Archives division, was responsible for the repatriation of most of the tens of thousands of artwork looted by the Nazis in the countries they had occupied. With the help of the US Army's Monuments Men—the name given to a hand-picked group of art historians and museum professionals commissioned for this important duty—massive numbers of objects were retrieved from their wartime hiding places and inventoried for repatriation. Iris Lauterbach's fascinating history documents the story of the Allies'

Central Collecting Point (CCP), set up in the former Nazi Party headquarters at Königsplatz in Munich, where the confiscated works were transported to be identified and sorted for restitution. This book presents her archival research on the events, people, new facts, and intrigue, with meticulous attention to the official systems, frameworks, and logistical and bureaucratic enterprise of the Munich CCP in the years from 1945 to 1949. She uncovers the stories of the people who worked there at a time of lingering political suspicions; narrates the research, conservation, and restitution process; and investigates how the works of art were managed and returned to their owners.

The New Transit Town Oct 05 2022 Transit-oriented development (TOD) seeks to maximize access to mass transit and nonmotorized transportation with centrally located rail or bus stations surrounded by relatively high-density commercial and residential development. New Urbanists and smart growth proponents have embraced the concept and interest in TOD is growing, both in the United States and around the world. New Transit Town brings together leading experts in planning, transportation, and sustainable design—including Scott Bernstein, Peter Calthorpe, Jim Daisa, Sharon Feigon, Ellen Greenberg, David Hoyt, Dennis Leach, and Shelley Poticha—to examine the first generation of TOD projects and derive lessons for the next generation. It offers topic chapters that provide detailed discussion of key issues along with case studies that present an in-depth look at specific projects. Topics examined include: the history of projects and the appeal of this form of development a taxonomy of TOD projects appropriate for different contexts and scales the planning, policy and regulatory framework of "successful" projects obstacles to financing and strategies for overcoming those obstacles issues surrounding traffic and parking the roles of all the actors involved and the resources available to them performance measures that can be used to evaluate outcomes Case Studies include Arlington, Virginia (Roslyn-Ballston

corridor); Dallas (Mockingbird Station and Addison Circle); historic transit-oriented neighborhoods in Chicago; Atlanta (Lindbergh Center and BellSouth); San Jose (Ohlone-Chynoweth); and San Diego (Barrio Logan). *New Transit Town* explores the key challenges to transit-oriented development, examines the lessons learned from the first generation of projects, and uses a systematic examination and analysis of a broad spectrum of projects to set standards for the next generation. It is a vital new source of information for anyone interested in urban and regional planning and development, including planners, developers, community groups, transit agency staff, and finance professionals.

Pierre Koenig May 08 2020 A heavily illustrated and highly designed tribute to Los Angeles architect Pierre Koenig, a key figure of the Los Angeles Modernist movement. In this remarkable and gorgeously illustrated book, Neil Jackson presents a vibrant profile of the Los Angeles architect Pierre Koenig, who Time magazine said lived long enough to become “cool twice.” From the influences of Koenig’s youth in San Francisco and his military service during World War II to the Case Study Houses and his later award-laden years, Jackson’s study

plots the evolution of Koenig's oeuvre against the backdrop of Los Angeles—a city that both shaped and was shaped by his architecture. The book is anchored by Jackson's exciting discoveries in Koenig's archive at the Getty Research Institute. Drawings, photographs, diaries, letters, lecture notes, building contracts, and university projects—many of which are published for the first time—provide an expanded understanding of Koenig and additional context for his architectural achievements. An examination of Koenig's Case Study Houses shows how his often single-minded and pragmatic approach to domestic architecture recognized the advantages of production housing and presciently embraced sustainable, ecologically responsible design. A new account of the Chemehuevi housing project in Havasu Lake, California, demonstrates the special role that learning and teaching played in the development of his architecture. Over his fifty-year career, Koenig not only designed iconic houses but also directed their restoration and curated their legacy, ensuring that his work could be seen and appreciated by present and future admirers of midcentury Los Angeles.
