engineer in almost every discipline. Not so long ago, it truly could be said that designers are trying to develop tomorrow's vehicles with yesterday's materials. Unfortunately, we find that the situation remains nearly the same today. The purpose of this conference was to identify materials, processes, and methods that show the greatest potential in future space technology and to define the gap between mission requirements and materials application. Of the many properties of materials, the one in which the largest gap between fundamental understanding and practical

application appears to exist is the mechanical property, particularly of crystalline materials. The emphasis on crystalline materials is a natural one. It is these materials which are used primarily when demands are placed on mechanical strength, especially at elevated temperatures. The advent of space exploration requires the utilization of materials in environments and under conditions that are a challenge to the resourcefulness and ingenuity of the scientist and engineer. The scientist can, as a result of the past

thirty years' work, relate mechanical properties to the formation, motion, and interaction of individual crystalline defects, such as vacancies, interstitials, and dislocations. Furthermore, he can, by controlled preparation of his materials, confine his studies to those cases in which the concentration of crystal defects is conveniently low.

In addition to his research activities, Leo Brewer has been a long-time participant in the dynamic undergraduate teaching program of the Berkeley Chemistry Department. He has provided crucial

tells the story of a research project as it has never been told before. Moving far beyond the conventional format of the research report, this remarkable book develops a sociology of the research process itself, centering on the telling of a story about how and why the research came into being, and what happened when it did. It demonstrates, furthermore, that the research process today must be seen within the wider context of a crisis in contemporary culture concerning the status and gendering of knowledge. Distinctively linking private troubles to public issues, Social

Support and Motherhood investigates the connection between social relations and the health and well-being of women and their babies. At the same time, it calls into question the very definition of 'health' and probes the complex relations between social science research, academic 'knowledge' and public policy. Developing many of the themes of her earlier work, Ann Oakley's new book will be welcomed by a wide range of readers.
