Using Science to Improve the BLM Wild Horse and Burro Program Oct 31 2019 Using Science to Improve the BLM Wild Horse and Burro Program: A Way Forward reviews the science that underpins the Bureau of Land Management's oversight of free-ranging horses and burros on federal public lands in the western United States, concluding that constructive changes could be implemented. The Wild Horse and Burro Program has not used scientifically rigorous methods to estimate the population sizes of horses and burros, to model the effects of management actions on the animals, or to assess the availability and use of forage on rangelands. Evidence suggests that horse populations are growing by 15 to 20 percent each year, a level that is unsustainable for maintaining healthy horse populations as well as healthy ecosystems. Promising fertility-control methods are available to help limit this population growth, however. In addition, science-based methods exist for improving population estimates, predicting the effects of management practices in order to maintain genetically diverse, healthy populations, and estimating the productivity of rangelands. Greater transparency in how science-based methods are used to inform management decisions may help increase public confidence in the Wild Horse and Burro Program.

Nationwide Response Issues After an Improvised Nuclear Device Attack Sep 30 2019 Our nation faces the distinct possibility of a catastrophic terrorist attack using an improvised nuclear device (IND), according to international and U.S. intelligence. Detonation of an IND in a major U.S. city would result in tens of thousands to hundreds of thousands of victims and would overwhelm public health, emergency response, and health care systems, not to mention creating unprecedented social and economic challenges. While preparing for an IND may seem futile at first glance, thousands of lives can be saved by informed planning and decision making prior to and following an attack. In 2009, the Institute of Medicine published the proceedings of a workshop assessing the health and medical preparedness for responding to an IND detonation. Since that time, multiple federal and other publications have added layers of detail to this conceptual framework, resulting in a significant body of literature and guidance. However, there has been only limited planning effort at the local level as much of the federal guidance has not been translated into action for states, cities and counties. According to an informal survey of community preparedness by the National Association of City and County Health Officials (NACCHO), planning for a radiation incident ranked lowest in priority among other hazards by 2,800 local health departments. The focus of Nationwide Response Issues After an Improvised Nuclear Device Attack: Medical and Public Health Considerations for Neighboring Jurisdictions: Workshop Summary is on key response requirements faced by public health and health care systems in response to an IND detonation, especially those planning needs of outlying state and local jurisdictions from the detonation site. The specific meeting objectives were as follows: - Understand the differences between types of radiation incidents and implications of an IND attack on outlying communities. - Highlight current planning efforts at the federal, state, and local level as well as challenges to the implementation of operational plans. -Examine gaps in planning efforts and possible challenges and solutions. -Identify considerations for public health reception centers: how public health and health care interface with functions and staffing and how radiological assessments and triage be handled. -Discuss the possibilities and benefits of integration of disaster transport systems. -Explore roles of regional health care coalitions in coordination of health care response.

Metrics That Matter for Population Health Action Aug 29 2019 In times of rapid change and constrained resources, measures that are important, focused, and reliable are vital. However there is an overabundance of measures available for evaluating various aspects of population health and

previous efforts to simplify existing sets to meet the needs of all decision makers have been unsuccessful. The National Academies of Sciences, Engineering, and Medicine convened a workshop to explore the status and uses of measures and measurement in the work of improving population health. Participants explored existing and emerging population health metric sets and characteristics of metrics necessary for stakeholder action across multiple sectors. This report summarizes the presentations and discussions from the workshop.

African Regional Trade Agreements as Legal Regimes Nov 12 2020 African regional trade integration has grown exponentially in the last decade. This book is the first comprehensive analysis of the legal framework within which it is being pursued. It will fill a huge knowledge gap and serve as an invaluable teaching and research tool for policy makers in the public and private sectors, teachers, researchers and students of African trade and beyond. The author argues that African Regional Trade Agreements (RTAs) are best understood as flexible legal regimes particularly given their commitment to variable geometry and multiple memberships. He analyzes the progress made toward trade liberalization in each region, how the RTAs are financed, their trade remedy and judicial regimes, and how well they measure up to Article XXIV of GATT. The book also covers monetary unions as well as intra-African regional integration, and examines free trade agreements with non-African regions including the Economic Partnership Agreements with the European Union.

Radical Markets Aug 10 2020 Revolutionary ideas on how to use markets to achieve fairness and prosperity for all Many blame today's economic inequality, stagnation, and political instability on the free market. The solution is to rein in the market, right? Radical Markets turns this thinking on its head. With a new foreword by Ethereum creator Vitalik Buterin and virtual reality pioneer Jaron Lanier as well as a new afterword by Eric Posner and Glen Weyl, this provocative book reveals bold new ways to organize markets for the good of everyone. It shows how the emancipatory force of genuinely open, free, and competitive markets can reawaken the dormant nineteenth-century spirit of liberal reform and lead to greater equality, prosperity, and cooperation. Only by radically expanding the scope of markets can we reduce inequality, restore robust economic growth, and resolve political conflicts. But to do that, we must replace our most sacred institutions with truly free and open competition—Radical Markets shows how.

How People Learn II Dec 02 2019 There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of

influences that affect individual learning. How People Learn II will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

Integration of FDA and NIOSH Processes Used to Evaluate Respiratory Protective Devices for Health Care Workers Jun 27 2019 Both the Food and Drug Administration (FDA) and the National Institute for Occupational Safety and Health (NIOSH) have responsibilities for evaluating and regulating respiratory protective devices ("respirators") for health care workers. Respirators protect the user from respiratory hazards by either removing contaminants from the air (air-purifying respirators) or by supplying clean air from another source (air-supplying respirators). Respirators that are used in workplaces in the United States must be approved by NIOSH and meet standards and test results specified by regulation. Respirators used by health care workers are air-purifying respirators that generally fall into three types: (1) disposable particulate filtering facepiece respirators (also termed N95s); (2) elastomeric respirators, also known as reusable respirators because they use a replaceable filter; or (3) powered air-purifying air respirators. To provide input to NIOSH and FDA and to discuss potential next steps to integrate the two agencies' processes to certify and approve N95 respirators for use in health care settings, a workshop was held by the National Academies of Sciences, Engineering, and Medicine in August 2016. The workshop was focused on exploring the strengths and limitations of several current test methods for N95 respirators as well as identifying ongoing research and research needs. This publication summarizes the presentations and discussions from the workshop.

Application of Systematic Review Methods in an Overall Strategy for Evaluating Low-Dose Toxicity from Endocrine Active Chemicals Jan 03 2020 To safeguard public health, the US Environmental Protection Agency (EPA) must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision-making. For decades the agency has dealt with questions about what animal-testing data to use to make predictions about human health hazards, how to perform dose-response extrapolations, how to identify and protect susceptible subpopulations, and how to address uncertainties. As alternatives to traditional toxicity testing have emerged, the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods. Endocrine active chemicals (EACs) have raised concerns that traditional toxicity-testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function, and small alterations in hormone concentrations, particularly during sensitive life stages, can have lasting and significant effects. To address concerns about

potential human health effects from EACs at low doses, this report develops a strategy to evaluate the evidence for such low-dose effects.

Representations of Sports Coaches in Film Sep 10 2020 This ground-breaking interdisciplinary collection brings together leading international scholars working across the humanities and social sciences to examine ways in which representations of sports coaching in narrative and documentary cinema can shape and inform sporting instruction. The central premise of the volume is that films featuring sports coaches potentially reflect, reinforce or contest how their audiences comprehend the world of coaching. Despite the growing interest in theories of coaching and in the study of the sports film as a genre, specific analyses of filmic depictions of sports coaches are still rare despite coaches often having a central role as figures shaping the values, social situation and cultural expectations of the athletes they train. By way of a series of enlightening and original studies, this volume redresses the relative neglect afforded to sports coaching in film and simultaneously highlights the immense value that research in this emerging field has for sporting performance and social justice. This book was originally published as a special issue of the journal *Sports Coaching Review*.
