volume treatise on economics. The first half 'Economic Principles' deals with the basics. The author of this volume is one of the great American economists. His contributions to economic literature have been notable, and while it would, of course, be too much to say that they have won universal acceptance, it can safely be affirmed that they have quite generally been accorded respectful and sympathetic attention. Professor Fetter occupies a place of distinction, not only as a thinker and writer in the field of economics, but also as a university

teacher. Several years ago he served also as President of the American Economic Association. Few are better qualified, therefore, to prepare a general treatise on economics. This volume constitutes the second part of a work dealing with the principles of economics which in some respects may be regarded as a revision of Professor Fetter's Principles of Economics, published as a single volume. But the treatment of the principles of value and distribution in volume I of the new work differs materially, if not radically, from that in the earlier text, and, at the same time, as Professor Fetter himself remarks, the years since have been so replete with interesting happenings in the field of practical problems that volume II represents more than a mere revision of the corresponding chapters in the earlier book. Hence, the present volumes taken together must be regarded as an essentially new contribution. Considering the variety of economic problems that Professor Fetter discusses, it seems extraordinary that he

has been able to compress his treatment within the limits of a comparatively small book. His success in this direction, however, has been due to his method of treatment. While essential facts have not been neglected, he has not attempted to give an encyclopedic description of all the elements involved in the several problems, but he has confined himself rather to a setting forth of the points of principle involved in them, suggesting in this connection, the solutions which sound analysis and a healthy for as a writer, it will appear superfluous to speak of style. But for those who may not know, let it be said that Professor Fetter writes with a nicety and clearness of expression and with a delicacy of touch and of humor that stamp him as a writer of the first class.

dysfunctional. Their quality-of-life is in free fall, and likely to get worse soon. In comparison, the wealthy one per cent are getting richer at an unprecedented rate. Economic inequality is increasing rapidly. The economy is working for them, not the majority. That's not how a democracy is supposed to work. It's supposed to serve the needs of the majority. Over the past forty years, our economy has been hijacked to serve the needs of the wealthy one per cent. They have used their power and influence to sway the political process; to change laws and regulations to serve them. This, together with a continuous stream of disinformation, falsehoods, half-truths, and obfuscation, has misled us into believing what they are doing is in our interests. Nothing can be further from the truth. They follow an economic policy called "neo-liberalism." Rather than liberate us, it has trapped us in a world of increasing economic injustice and insecurity, creating huge social, environmental and economic problems.

Therefore, a more fitting name would be "enslavement economics." Enslaving the majority through the practices, procedures and systems of a few. Another apt name would be "apartheid economics" - an economy serving the needs of a few while excluding the majority. Whatever you want to call it - it's economic injustice and a screw-up of epic proportions. Most people know we have a problem, but they don't know what, or how to fix it, if at all. We all have a different perspective of the world - different things concern us. However, all these different concerns have a common underlying cause - our economy. When the economy is imbalanced (only serving a few), as it is now, it causes an adverse ripple effect throughout life. So, no matter what concerns you, it's more than likely linked to an imbalanced economy. You are NOT going to address your concerns effectively until you address the problems of an imbalanced economy. You need to understand what economic issues underlie

your problems. Only with this knowledge and understanding can you make a difference by calling on the government to take specific action. Change does not occur through vague demands. It only happens when one is specific about a problem and its solution. Therefore, this book provides an important first step in helping you understand what's really causing the problems which concern you. It explains, in layman terms, the cause of our problems and their solutions. It brings a new and different perspective to help solve our economic crisis, with clarity and simplicity. It's not written for academics or business people, most of whom are part of the problem, but for the man and woman in the street, who want answers and solutions to problems affecting them and their world. It is only through mass awareness and action that much-needed change will come about. However, for this to happen, people need to understand the problems, not in any detail, but sufficient to be able to see through the misleading nonsense

fed them over the decades. Through this basic understanding, they will be able to spread the word effectively and get everybody to call on the government to step in and reverse these bad and harmful practices. This is not somebody else's problem or a problem you can ignore. It's going to affect you and your family if it hasn't already. These problems can only be reversed through a democratic process. So, if you don't get involved, by spreading the word and demanding change, things will rapidly get worse. Shortly, we will face massive change in the labour market, which will affect everybody. The wealthy one per cent will use these changes to their advantage, not yours. If things are bad now, they are about to get a lot worse unless you do something about it.

conversations with well-known economists and sociologists. Among the economists interviewed are Gary Becker, Amartya Sen, Kenneth Arrow, and Albert O. Hirschman; the sociologists include Daniel Bell, Harrison White, James Coleman, and Mark Granovetter. The picture that emerges is that economists and sociologists have paid little attention to each other during most of the twentieth century: social problems have been analyzed as if they had no economic dimension and economic problems as if they had no social dimension. Today, however, there is a dialogue between the two fields, as economists take on social topics and as sociologists become interested in rational choice and "new economic sociology." The interviewees describe how they came to challenge the present separation between economics and sociology, what they think of the various proposals to integrate the fields, and how they envision the future. The author summarizes the results of the conversations in the final chapter. The individual

The second half of the book gives a thorough account of probability, optimisation and dynamics. The final two chapters are an introduction to the rigorous mathematical analysis used in graduate-level economics. The emphasis throughout is on intuitive argument and problem-solving. conventional approaches have failed to resolve, this groundbreaking handbook of original works by leading behavioral economists offers the first comprehensive articulation of behavioral economics theory. Borrowing from the findings of psychologists, sociologists, political scientists, legal scholars, and biologists, among others, behavioral economists find that intelligent individuals often tend not to behave as effectively or efficiently in their economic decisions as long held by conventional wisdom. The manner in which individuals actually do behave critically depends on psychological, institutional, cultural, and even biological considerations. "Handbook of Contemporary Behavioral Economics" includes coverage of such critical areas as the Economic Agent, Context and Modeling, Decision Making, Experiments and Implications, Labor Issues, Household and Family Issues, Life and Death, Taxation, Ethical Investment and Tipping, and Behavioral Law and Macroeconomics.
