The Sea-Craft of Prehistory May 17 2021 The nautical dimension of prehistory has not so far received the attention it deserves. It is also too often assumed that early man was land bound, yet this is demonstrably not the case. Recent research has shown that man travelled and tracked over greater distances and at a much earlier date than has previously been thought possible. Some of these facts can be explained only by man's mastery of water transport from earliest times. This book, by an acknowledged expert on prehistoric sea-craft, examines these problems looking at the new archaeological information in the light of the author's nautical knowledge. The result is a detailed account of man's use of inland and ocean-going craft from earliest times until the dawn of recorded history. All forms of evidence are critically assessed, from the vessels of Ancient Egypt to the Chinese junk, to present of comprehensive picture of the vessels men have built through the ages, and of the variety of ways in which they have been used.

Computerworld Sep 28 2019 For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's

award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

"Women and Things, 1750-1950" Jul 07 2020 In contrast to much current scholarship on women and material culture which focuses primarily on women as consumers, this essay collection provides case studies of women who produced material objects. The essays collected here make an original contribution to material culture studies by focusing on women's social practices in relation to material culture. The essays as a whole are concerned with women's complex and active engagement with material culture in the various stages of the material object's life cycle, from design and production to consumption, use, and redeployment. Also, theorized and described are the ways in which women engaged in meaning making, identity formation, and commemoration through their manipulation of materials and techniques, ranging from taxidermy and shell work to collecting autographs and making scrapbooks. This volume takes as its object of investigation the overlooked and often despised categories of women's decorative and craft activities as sites of important cultural and social work. This volume is interdisciplinary with essays by art historians, social historians, literary critics, rhetoricians, and museum curators. The scope of the volume is international with essays on eighteenth-century German silhouettes, Australian aboriginal ritual practices, Brittany mourning rites, and Soviet-era recipes that provide a comparative framework for the majority of essays which focus on British and North American women who lived and worked in the long nineteenth century. This volume will appeal to a broad range of students and scholars in women's history, art history, cultural studies, museum studies, anthropology, cultural and social history, literature, rhetoric, and material culture studies.

Robotic Sailing Mar 03 2020 While sailing has a long tradition, both as a means of transportation and as a sport, robotic sailing is a fairly new area of research. One of its unique characteristics is the use of wind for propulsion. On the one hand, this allows for long range and long term autonomy. On the other hand, the dependency on changing winds presents a serious challenge for short and long term planning, collision avoidance, and boat control. Moreover, building a robust and seaworthy sailing robot is no simple task, leading to a truly interdisciplinary engineering problem. These proceedings summarize the state of the art as presented at the International Robotic Sailing Conference 2011. Following an overview of the history of autonomous sailing a number of recent boat designs is presented, ranging from small one-design boats to vessels built to cross the Atlantic Ocean. Subsequently, various aspects of system design and validation are discussed, further highlighting the interdisciplinary nature of the field. Finally, methods for collision avoidance, localization and route planning are covered.

Understanding Interaction: The Relationships Between People, Technology, Culture, and the Environment Sep 01 2022 Understanding Interaction explores the interaction between people and technology in the broader context of the relations between the human-

made and the natural environments. It is not just about digital technologies – our computers, smartphones, the Internet – but all our technologies, such as mechanical, electrical, and electronic. Our ancestors started creating mechanical tools and shaping their environments millions of years ago, developing cultures and languages, which in turn influenced our evolution. Volume 1 looks into this deep history, starting from the tool-creating period (the longest and most influential on our physical and mental capacities) to the settlement period (agriculture, domestication, villages and cities, written language), the industrial period (science, engineering, reformation, and renaissance), and finally the communication period (mass media, digital technologies, and global networks). Volume 2 looks into humans in interaction – our physiology, anatomy, neurology, psychology, how we experience and influence the world, and how we (think we) think. From this transdisciplinary understanding, design approaches and frameworks are presented to potentially guide future developments and innovations. The aim of the book is to be a guide and inspiration for designers, artists, engineers, psychologists, media producers, social scientists, etc., and, as such, be useful for both novices and more experienced practitioners. Image Credit: Still of interactive video pattern created with a range of motion sensors in the Facets kaleidoscopic algorithm (based underwater footage of seaweed movement) by the author on 4 February 2010, for a lecture at Hyperbody at the Faculty of Architecture, TU Delft, NL.

Sacred Landscapes in Antiquity Nov 22 2021 From generation to generation, people experience their landscapes differently. Humans depend on their natural environment: it shapes their behavior while it is often felt that deities responsible for both natural benefits and natural calamities (such as droughts, famines, floods and landslides) need to be appeased. We presume that, in many societies, lakes, rivers, rocks, mountains, caves and groves were considered sacred. Individual sites and entire landscapes are often associated with divine actions, mythical heroes and etiological myths. Throughout human history, people have also felt the need to monumentalize their sacred landscape. But this is where the similarities end as different societies had very different understandings, beliefs and practices. The aim of this new thematic appraisal is to scrutinize carefully our evidence and rethink our methodologies in a multi-disciplinary approach. More than 30 papers investigate diverse sacred landscapes from the Iberian peninsula and Britain in the west to China in the east. They discuss how to interpret the intricate web of ciphers and symbols in the landscape and how people might have experienced it. We see the role of performance, ritual, orality, textuality and memory in people's sacred landscapes. A diachronic view allows us to study how landscapes were 'rewritten', adapted and redefined in the course of time to suit new cultural, political and religious understandings, not to mention the impact of urbanism on people's understandings. A key question is how was the landscape manipulated, transformed and monumentalized – especially the colossal investments in monumental architecture we see in certain socio-historic contexts or the creation of an alternative humanmade, seemingly 'non-natural' landscape, with perfectly astronomically aligned buildings that define a cosmological order? Sacred Landscapes therefore aims to analyze the complex links between landscape, 'religiosity' and society, developing a dialectic framework that explores sacred landscapes across the ancient world in a dynamic, holistic, contextual and historical perspective.

OIKOS Mar 15 2021 This collection of papers explores whether the Lévi-Straussian notion

of the House is a valid concept in aiding the comprehension of the social structure of Bronze Age Aegean societies. The volume succeeds in stressing the advances made in the study of social structure of the Aegean on the basis of material remains.

Minoan Archaeology Sep 20 2021 More than 100 years ago Sir Arthur Evans' spade made the first cut into the earth above the now well-known Palace at Knossos. His research at the Kephala hill as well as contemporary fieldwork at further sites on Crete saw the birth of a new discipline: Minoan Archaeology. Since these beginnings in the first decades of the 20th century, the investigation of Bronze Age Crete has experienced fundamental progress. The impressive wealth of new data relating to the sites and material culture of this Bronze Age society and its impact beyond the island's shores, the refinement of its chronology, the constant development of hermeneutical approaches to social, religious or political issues, and new methods and instruments employed for the exploration and conservation of the archaeological remains have shaped the dynamic trajectory of this discipline for more than a century. In March 2011 - exactly 111 years after the beginning of Evans' work at Knossos - a conference on Minoan Archaeology took place at Heidelberg with the aim to outline current trends and prospects of this scientific field, by setting up an open dialogue between renowned scholars and the young generation of researchers. The present volume brings together most of the papers presented during the conference. They are subsumed under six chapters highlighting current key issues in the study of Bronze Age Crete with a pronounced focus on the broad subject of society.

Tracing Prehistoric Social Networks through Technology Sep 08 2020 This volume investigates smaller and larger networks of contacts within and across the Aegean and nearby regions, covering periods from the Neolithic until Classical times (6000–323 BC). It explores the world of technologies, crafts and archaeological 'left-overs' in order to place social and technological networks in their larger economic and political contexts. By investigating ways of production, transport/distribution, and consumption, this book covers a chronologically large period in order to expand our understanding of wider cultural developments inside the geographical boundaries of the Aegean and its regions of contact in the east Mediterranean. This book brings together scholars' expertise in a variety of different fields ranging from historical archaeology (using textual evidence), archaeometry, geoarchaeology, experimental work, archaeobotany, and archaeozoology. Chapters in this volume study and contextualize archaeological remains and explore networks of crafts-people, craft traditions, or people who employed various technologies to survive. Central questions in this context are how and why traditions, techniques, and technologies change or remain stable, or where and why cross-cultural boundaries developed and disintegrated.

Congressional Record May 29 2022 The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States (1789-1824), the Register of Debates in Congress (1824-1837), and the Congressional Globe (1833-1873)
