Nursing Research Using Participatory Action Research Jan 03 2020 PAR is the ultimate in
social justice practice. I suggest that PAR should be the basis for all nursing research. This
book will provide you with the basics for getting started. ó Patricia J. Kelly, PhD, MPH, APRN
University of Missouri ñ Kansas City (From the Foreword) Participatory action research is a
qualitative research method conducted in collaboration with a community of people in order to
effect changes in the community that are relevant to the residents. This is a practical, "how-to"
resource for conducting participatory action research that guides readers, step by step, through
planning, conducting, and disseminating nursing research using this qualitative design. It is
part of a unique series of seven books devoted to nursing research using qualitative designs
and methods. Examples from actual research along with author commentary illustrate potential
pitfalls and challenges that may occur during the process and how to resolve them. Written by
a leading scholar of nursing research and nurse experts in participatory action research, the

book describes its philosophical underpinnings and state-of-the-art techniques, and provides a concrete road map for planning and conducting studies. It considers why this particular research method is best suited for a particular study, ethical considerations, and potential obstacles. The book also discusses how to ensure rigor during a study, providing examples from scholarly literature and the authors' own work. Each case example features a description of the study, including why the investigator decided to use participatory action rather than another research design, how he or she solved gatekeeper and access-to-sample issues, and institutional review board concerns. Also included is a discussion of how to collect and analyze data and how to disseminate findings to both the scientific community and research participants. With a focus on practical problem solving throughout, the book will be of value to novice and experienced nurse researchers, graduate teachers, in-service educators, students, and nursing research staff at health care institutions. Key Features: Describes, step by step, how to plan, conduct, and disseminate participatory action research Delivers new designs and methods Focuses on solving practical problems related to the conduct of research Features rich nursing exemplars in a variety of health/mental health clinical conditions in the United States and internationally

The Emergency Medical Responder Apr 05 2020 Emergency medical service providers serve as the primary immediate response to emergencies of all kinds, including natural disasters and acts of terrorism in the United States, with states serving as the regulatory agencies responsible for training, scope of practice, and continuing education for potential and working EMS providers. This text serves as a comprehensive guide to individuals in training to become emergency medical service providers and complements Emergency Medical Technician (EMT) and Emergency Medical Responder (EMR) courses as the primary classroom text consistent with National EMS Curriculum Standards and other industry guidelines. Each chapter addresses a relevant organ system and its physiology, methods of assessment, treatment recommendations, along with a case study to illustrate the topics at hand. So much of what is involved in emergency medical services is based on practical and applicable knowledge of situations, and these case studies will provide students with exposure to the field work they will be responding to. Written with the context of COVID-19 implications in mind, this is first EMT text of its kind produced after the onset of the pandemic, with considerations and citations from national and international emergency medicine journals to incorporate guidelines and best-practices in light of shifting conditions and expectations.
