 Down Jul 07 2020 "This book will save your life" Pete Whittaker (Wide Boyz) Down is a groundbreaking encyclopedic study of the art of descent. Its purpose is to create a single source for all descent techniques, both the well established and ideal for the novice climber, as well as the cutting edge, high-value techniques for experienced and pro climbers. The book was written and illustrated over three years by award-winning climber and writer Andy Kirkpatrick (Psychovertical, Cold Wars, 1001 Climbing Tips, Higher Education), and is based on four decades of epics, retreats and F**k-ups. At 80,000 words (400 pages) and 300 illustrations, this is both a labour of love and an important and timely book for a community that loses far too many climbers to rappelling accidents. Book Structure Foreword by Joe Simpson Introduction Chapter 1: Safety; How to stay alive. Chapter 2: Feet; General notes on non-technical descent in both winter and summer. Chapter 3: Tools; The tools of the trade and how to use those tools. This chapter covers all types of descenders, as well as notes on all associated software and hardware (abseil cord, hard-links, prusik cords etc). Chapter 4: Anchors; Everything from slinging trees to retrievable ice screws, bounce testing to non-anchor anchors. Chapter 5: Rappel; Here we start putting it all together, covering the core theory of descent, including back-ups, knots, and optimum set-ups. Chapter 6: Lowering; This covers both standard lowering off sports routes and backing off climbs, to more advanced self-rescue lowering, passing knots etc. Chapter 7: Advanced; This long chapter deals with pro techniques, many that will be new to many climbers, including blocking, ghosting and single rope rappels. Chapter 8: Problems; Sooner or later you're going to have to deal with problems in descent, such as stuck or damaged ropes, having ropes that don't reach anchors, or having to return back up your ropes. This chapter aims to come up with practical solutions for worst-case scenarios. Chapter 9: Comms: Many of the problems that arise in descent revolve around a failure in communication. This chapter offers some ideas and solutions surrounding this.

 World-Class Grooming for Horses Nov 30 2019 When owning, training, riding, and showing horses, there is a certain "look" to which one aspires. World-class "turnout"—a horse in peak condition, perfectly coiffed and luminous with health, outfitted with gleaming and well-fit tack appropriate for his sport—can take your breath away. And while it can certainly play a significant role in a competitive rider's success, it is just as appealing to have any horse "groomed to the nines," whether he's headed for an afternoon lesson or just out on the trail. Achieving this superior look is not just about clean tack, shiny brass, spotless stockings, or perfect braids. The most important steps are in the day-to-day nitty-gritty of grooming and caring for the horse: noticing "something not-quite-right" about the way the horse looks or moves before it becomes "something wrong"; brushing and combing and trimming a little every day so the horse's skin and coat remain healthy; knowing how to prepare a horse properly for training, and how to cool him down

afterward. Now, two of the best professional grooms in the business share their trade secrets, with over 1200 color photographs accompanying the ultimate modern-day guide for all riders who want their horses to look and feel their best.

Virtual Worlds Nov 03 2022 In Virtual Worlds, Benjamin Woolley examines the reality of virtual reality. He looks at the dramatic intellectual and cultural upheavals that gave birth to it, the hype that surrounds it, the people who have promoted it, and the dramatic implications of its development. Virtual reality is not simply a technology, it is a way of thinking created and promoted by a group of technologists and thinkers that sees itself as creating our future. Virtual Worlds reveals the politics and culture of these virtual realists, and examines whether they are creating reality, or losing their grasp of it. 12 photographs.

Spatial and Temporal Reasoning Jun 25 2019 Qualitative reasoning about space and time - a reasoning at the human level - promises to become a fundamental aspect of future systems that will accompany us in daily activity. The aim of Spatial and Temporal Reasoning is to give a picture of current research in this area focusing on both representational and computational issues. The picture emphasizes some major lines of development in this multifaceted, constantly growing area. The material in the book also shows some common ground and a novel combination of spatial and temporal aspects of qualitative reasoning. Part I presents the overall scene. The chapter by Laure Vieu is on the state of the art in spatial representation and reasoning, and that by Alfonso Gerevini gives a similar survey on research in temporal reasoning. The specific contributions to these areas are then grouped in the two main parts. In Part II, Roberto Casati and Achille Varzi examine the ontological status of spatial entities; Anthony Cohn, Brandon Bennett, John Gooday, and Nicholas Gotts present a detailed theory of reasoning with qualitative relations about regions; Andrew Frank discusses the spatial needs of geographical information systems; and Annette Herskovits focuses on the linguistic expression of spatial relations. In Part III, James Allen and George Ferguson describe an interval temporal logic for the representation of actions and events; Drew McDermott presents an efficient way of predicting the outcome of plan execution; and Erik Sandewall introduces a semantics based on transitions for assessing theories of action and change. In Part IV, Antony Galton's chapter stands clearly between the two areas of space and time and outlines the main coordinates of an integrated approach.

Prose Works 1892 Aug 27 2019 General Series Editors: Gay Wilson Allen and Sculley Bradley Originally published between 1961 and 1984, and now available in paperback for the first time, the critically acclaimed Collected Writings of Walt Whitman captures every facet of one of America's most important poets. The two-volume set of Prose Works 1892 proves that Whitman's prose has a quality no less original and distinctive than his poetry. Originally written and published as newspaper dispatches, Specimen Days is a collection of Whitman's on-the-spot notes of his experiences as a volunteer nurse in the hospitals in and around Washington during the Civil War. It contains, too, his nature studies, jotted down at the Stafford Farm near Camden during the years of convalescence after his paralysis in 1873. In these records of his observations, Whitman's love and devoted care of the individual soldiers overshadow his concern for the course of the war itself and his interest in its major personalities. He sees, above all else, the wounded men in front of him, and these he describes in the simple, direct language that unmistakably marks his poetry as well.

Algorithms for Parallel Polygon Rendering Jul 19 2021 This richly illustrated volume draws from a variety of sources to present a reference work for this remarkable volcanic province. Detailed descriptions of 44 major potentially active (Holocene) volcanoes form the core of the book. A compendium of geographical and morphological data on location, type, synonyms, summit elevation, edifice height, and status for each center, is followed by a summary of the structural and volcanological evolution of the edi- fice, historic and present activity, petrological and geochemical data, and an assessment of volcanic hazard. Each entry is superbly illustrated with a false color Landsat Thematic Mapper image, maps and ground photographs. Chapters on Holocene minor centers, and long-lived silicic caldera complexes are also well illustrated and summarise the available information on these important structures. General characteristics of these Holocene centers are then synthesised with data from older episodes of volcanism in a final chapter discussing regional volcanic evolution. In addition, the volume also contains a database summarising morphological, relative age, and volcanological data for all identifiable volcanic editifices in this volcanic province.
